Summary Description and rationale of project and funding sources:								
Funding is needed to provide for cyclical repair and maintenance to bridge inclusive of cable maintenance. Work needed includes engineering evaluation of bridge for safety needs and identification of all cyclical maintenance needs. Likely the engineering work will need to be bid in conjunction with the design of renovations to California St. Pedestrian bridge in order to create an attractive bid package. Securing services to work on the Madison Underbridge has been challenging to advance due to lack of local contractor's with cable bridge experience,								
History & Current Status: Impact if Cancelled or Delayed								
The Madison Underbridge was built in 2005 - 2006. The bridge is overdue for an engineering safety inspection and performance of cyclical maintenance including repair and replacement of abutment expansion pads and rebalancing of the cable stay system. Users are noting the bridge deck is increasingly more "bouncy" especially when there are many people using the bridge. The bridge deck is bouncing as a result of the cable system being out of balance and loose. Staff efforts to bid and secure a contractor to perform cable maintenance have not been successful due in part to lack of bridge builders in State that have any experience with cable stayed bridges.
