Summary Description and rationale of project and funding sources:									
The City of Missoula’s authoritative geographic data needs grow in direct proportion to the growth of our community and investment in updated aerial imagery is necessary every 3 years to keep pace. Aerial imagery will be captured in the spring of 2026 in a timeframe that will reduce objects that obscure an image such as snow, leaves, shadows, clouds, and smoke. The imagery will be captured at 3-inch resolution, covering the full extent of the Utility Service Area Boundary, to provide the highest accuracy possible and the ability to support required analysis and asset identification. Aerial imagery is a data product that supports almost every City department in their specific missions as well as the City-wide strategic initiatives of Public Safety and Wellness, Community Design and Livability, and Organizational Excellence.									
History & Current Status: Impact if Cancelled or Delayed									
Aerial imagery was most recently captured in the spring of 2020 and the spring of 2023. Failure to capture new imagery in the spring of 2026 will significantly impact the City’s ability to analyze recent growth, update based on changes after the 2024 wind-storm, and plan for continued heavy growth in the coming years.
