Summary Description and rationale of project and funding sources:									
The proposed project is to prepare a preliminary engineering report for infrastructure improvements in the Lincoln Hills and Lincolnwood residential areas in the Rattlesnake Creek watershed. Intense storms in the Rattlesnake watershed in 2023 demonstrated serious deficiencies in the stormwater system. One home was flooded twice and others were at risk of flooding due to inadequate or failing infrastructure. The streets and drainage facilities in these neighborhoods were not designed to handle the volume and intensity of stormwater runoff from recent extreme rainfall events. An engineering analysis is needed to determine the most practicable alternatives to improve infrastructure, prevent flooding, and protect water quality. This project is fully funded by the State Department of Emergency Services State Resiliency Fund, and no local match is required.									
History & Current Status: Impact if Cancelled or Delayed									
The affected neighborhoods will continue to have inadequate drainage infrastructure, with potential for localized flooding and discharging untreated stormwater to Rattlesnake Creek.
