Summary Description and rationale of project and funding sources:									
RRF staff have recently become aware that portions of the Primary Effluent Lift Station (PELS) and the headworks grit removal facilities are not adequately protected by an air scrubber system. This leads to the formation of odors, but more importantly causes hydrogen sulfide gas to accumulate which is causing significant damage to the concrete structures. Hydrogen sulfide gas is also dangerous to workers. This project will install a new scrubber unit as well as additional ducting to improve air flow, which will be polished in the scrubber unit. A future project will address the structural damage to the concrete structures. This project will be funded using Wastewater Enterprise Funds in order to accelerate completion of the project.
